FINAL REPORT

This report supercedes all previous reports for this case

Serology

CAE-OPP ELISA

Animal Item	Animal Id	Result	%I
D25-004125-1	2-NARCISSUS	NEGATIVE	6.954
D25-004125-2	4-READY PLAYER ONE	NEGATIVE	8.206
D25-004125-3	5-KIMBERLY	NEGATIVE	10.804
D25-004125-4	6-CARLY	NEGATIVE	10.867
D25-004125-5	8-LILY	NEGATIVE	12.223
D25-004125-6	10-BUNNY	NEGATIVE	9.322

Test Interpretation

% inhibition legend: $\geq 35\%$, positive; $< 35\%$, negative.

CAPRINE JOHNE'S ANTIBODY ELISA

Animal Id	Result	S/P
2-NARCISSUS	NEGATIVE	0.13
4-READY PLAYER ONE	NEGATIVE	0.49
5-KIMBERLY	NEGATIVE	0.27
6-CARLY	NEGATIVE	0.45
8-LILY	NEGATIVE	0.30
10-BUNNY	NEGATIVE	0.14

Test Interpretation

Caprine serum samples having an S/P value equal to or greater than 0.80 are positive
Caprine serum samples having an S/P value less than 0.80 are negative.

SERUM PREGNANCY TEST

Animal Id	Result	S-N
2-NARCISSUS	PREGNANT	0.696

SERUM PREGNANCY TEST

Animal Id	Result	S-N
4-READY PLAYER ONE	PREGNANT	0.773
5-KIMBERLY	PREGNANT	1.638
6-CARLY	PREGNANT	1.330
8-LILY	PREGNANT	1.334
10-BUNNY	PREGNANT	2.185

Test Interpretation

S-N value of less than .300 = open

S-N value of equal or greater than .300 = pregnant

For bovine samples only: because of the potential of early embryonic death, we suggest those animals with values between .300 and 1.00 be retested in 7 to 14 days to confirm pregnancy.

CATTLE - CAN BE USED TO DETERMINE PREGNANCY STATUS IN COWS/HEIFERS AT LEAST 28 DAYS SINCE BREEDING AND 60 OR MORE DAYS AFTER CALVING.

For help interpreting the results, please contact KSVDL Client Care at (785) 532-5650 or 866-512-5650.
